

MSS SYSTEM

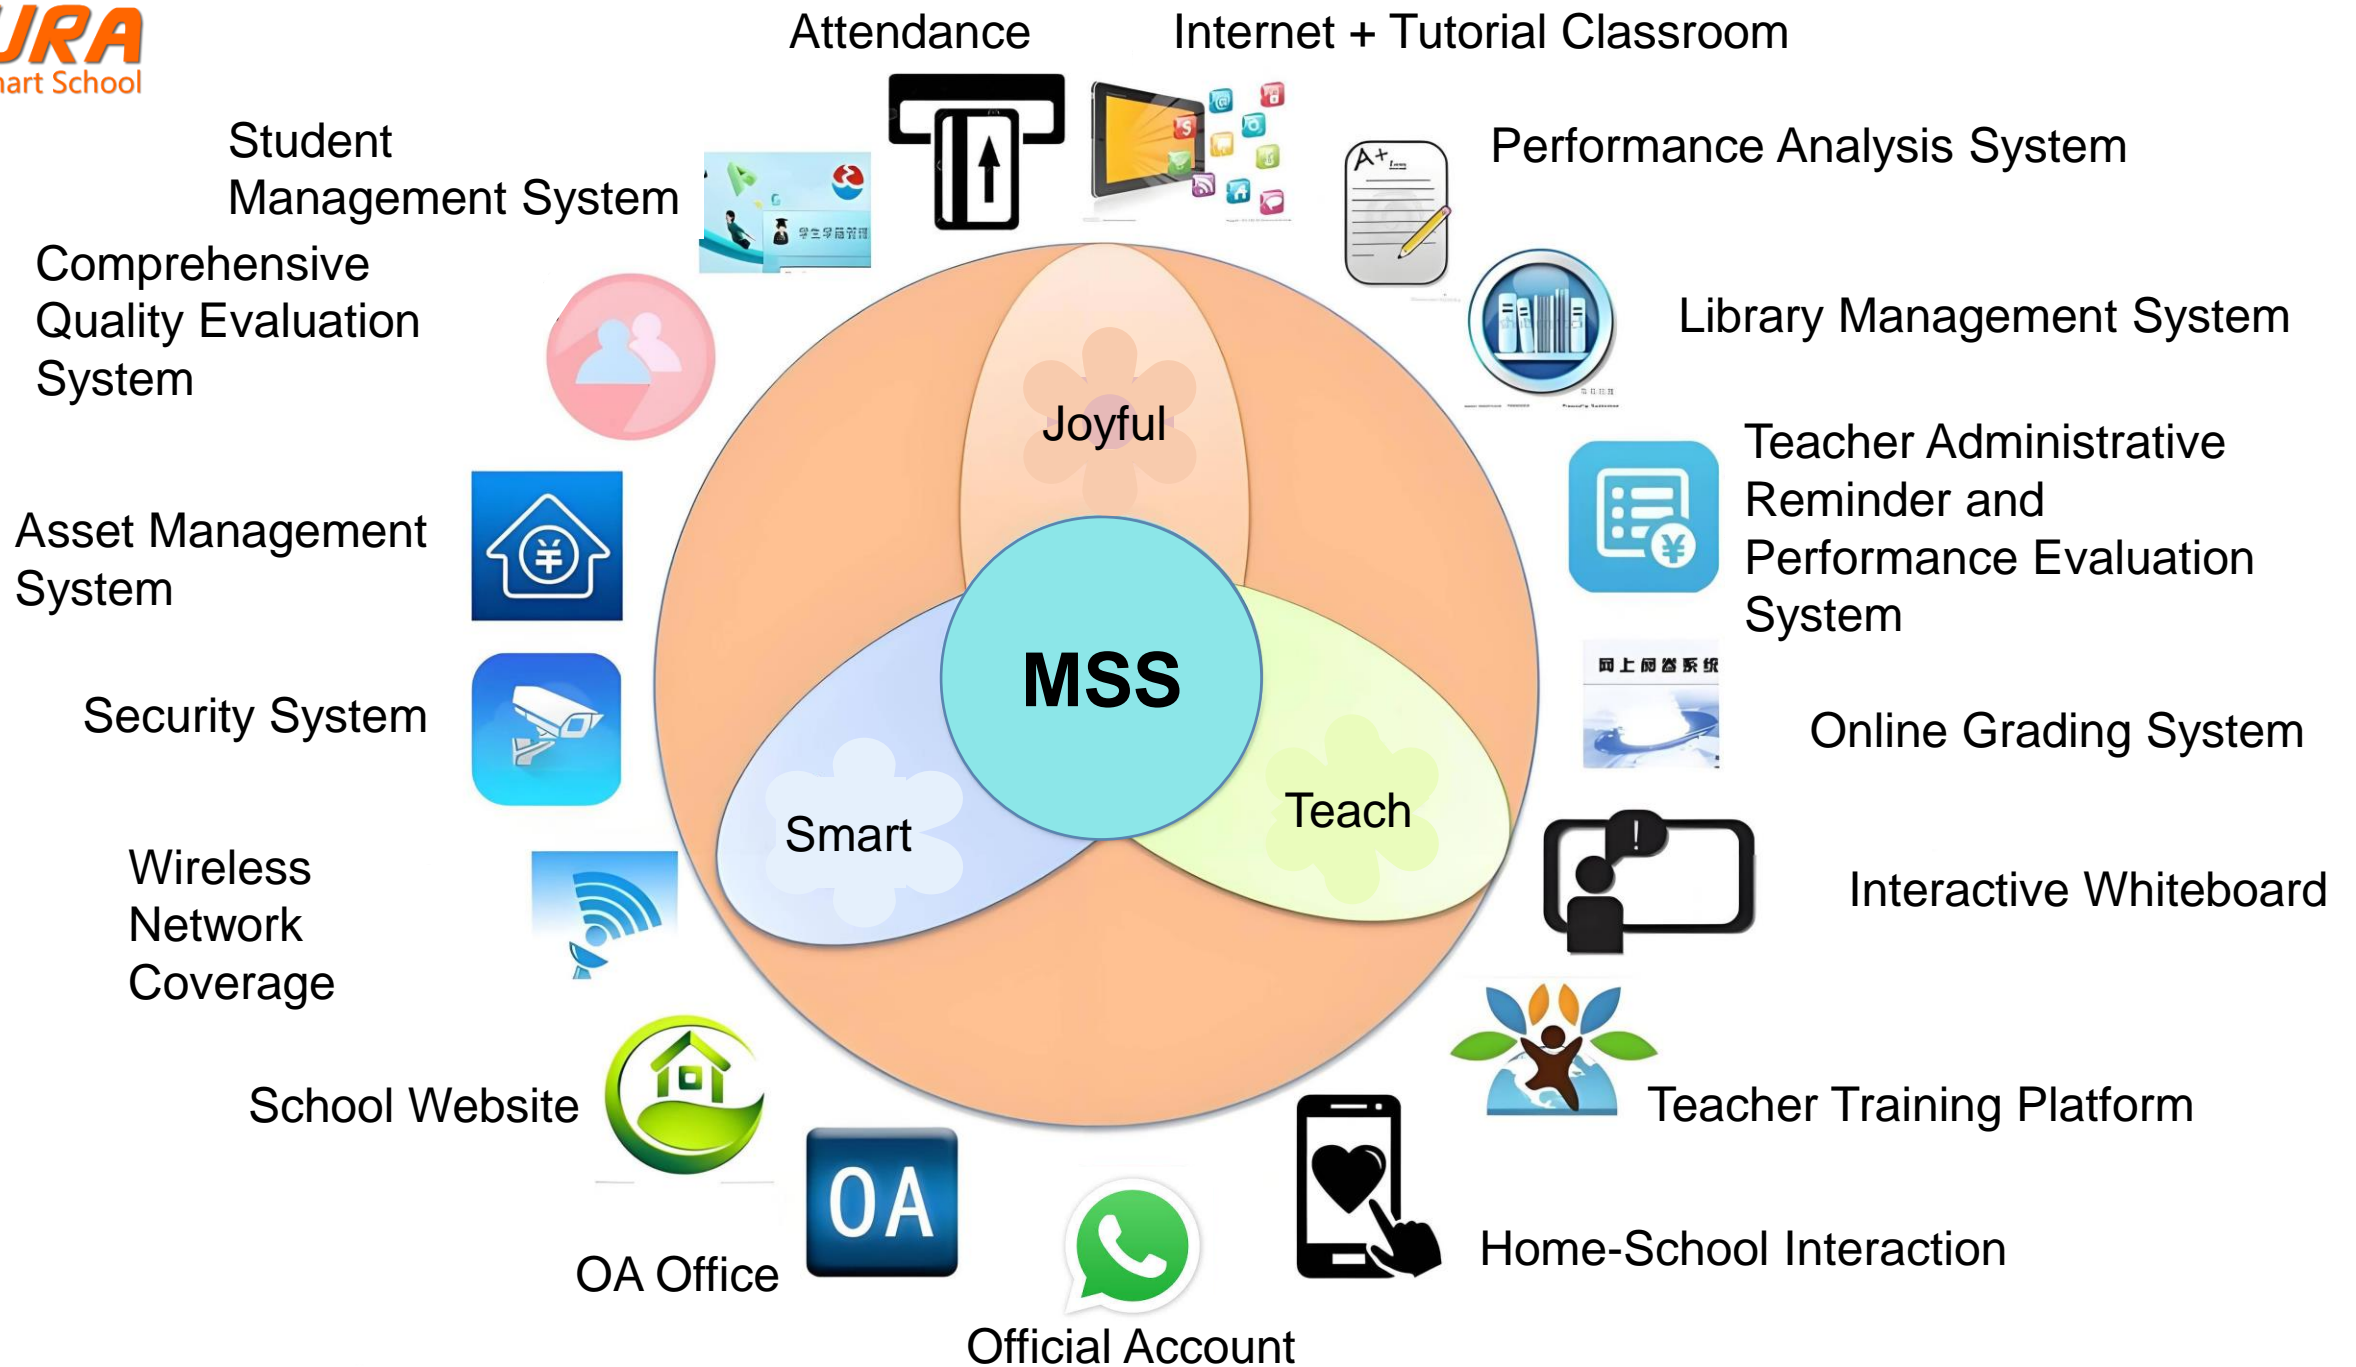

My Smart School

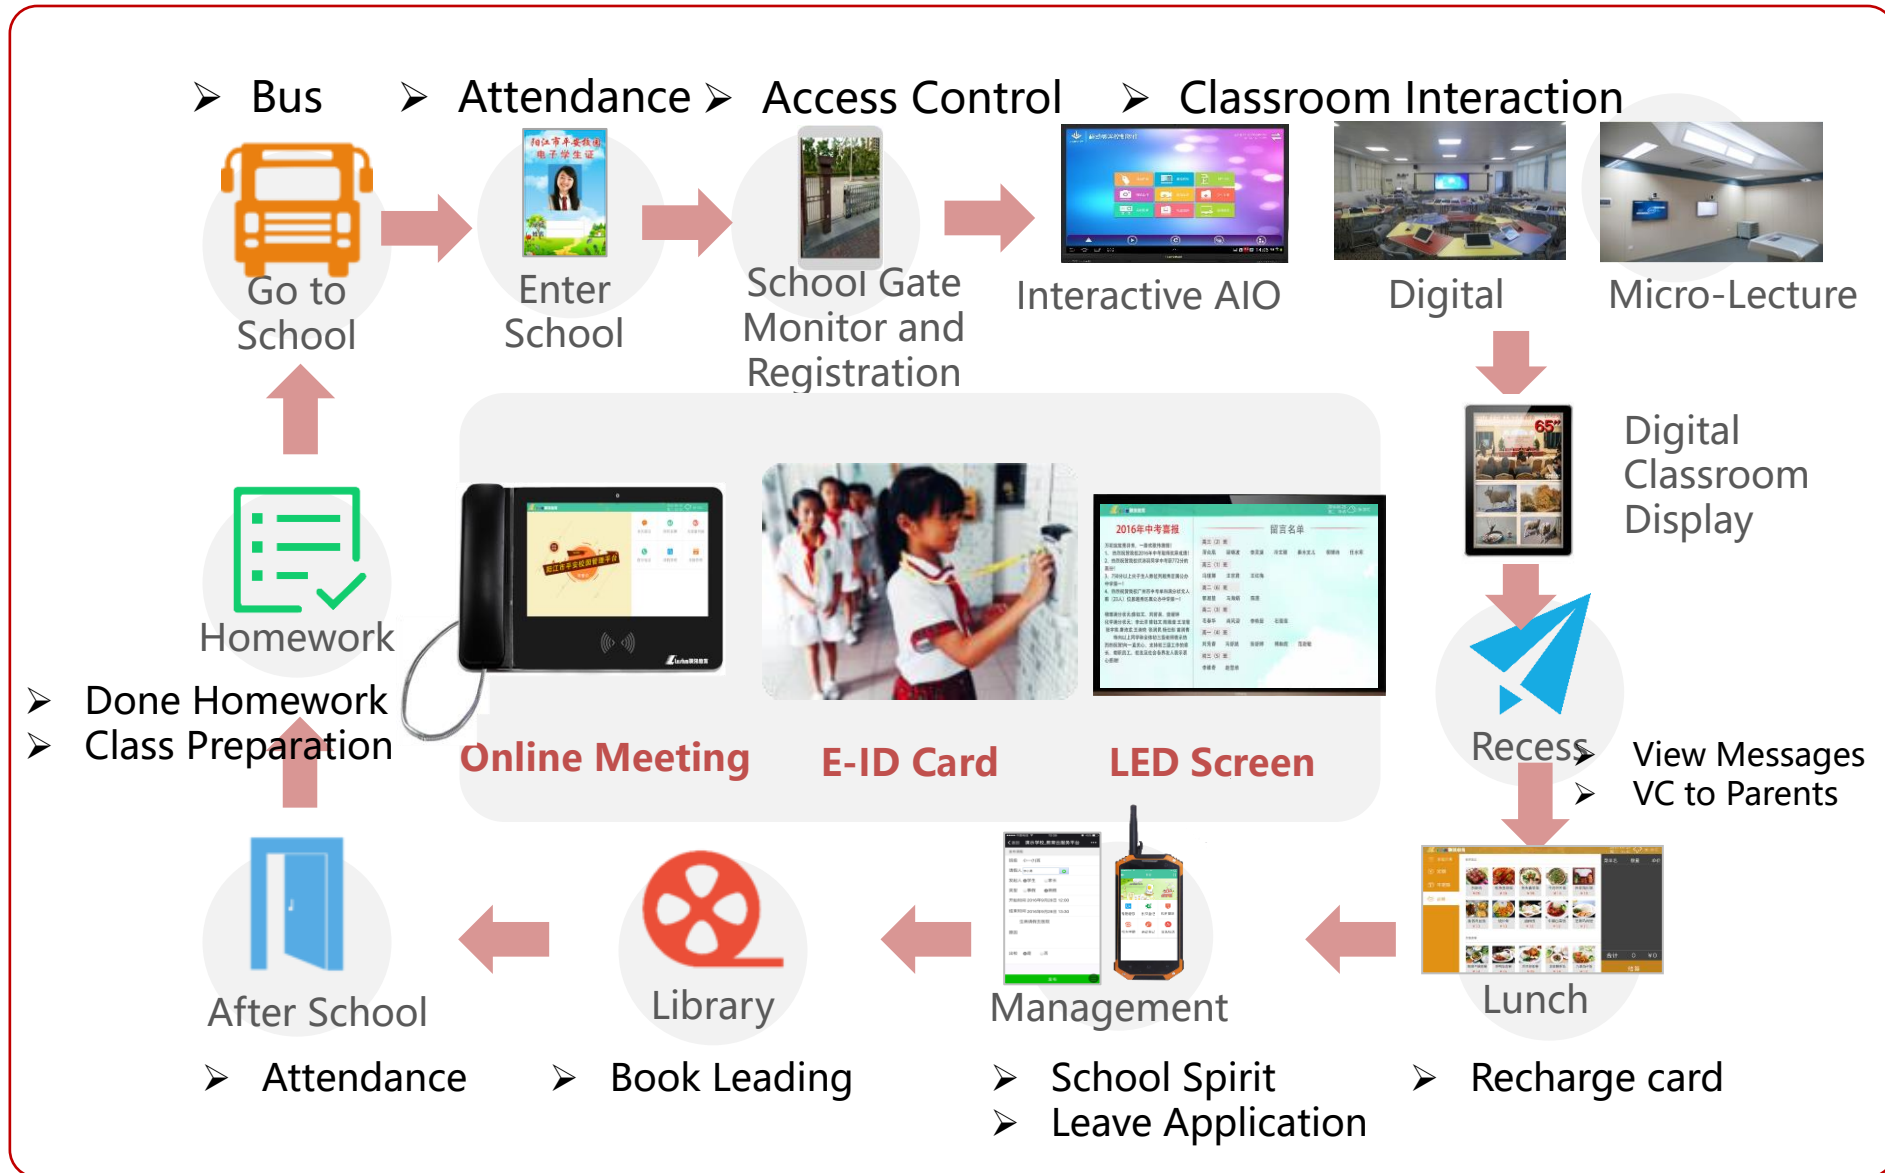

The Significance of Implementing a Smart School Project

1. Enhances the comprehensive technical defense capabilities for school and school bus safety.
2. Improves the level of informatized school management.
3. Encourages parents to participate in supervising students' learning and personal safety.
4. Greatly strengthens mutual communication and interaction between the school and parents.
5. Boosts the school's image and brand while improving teaching and management efficiency.
6. Responds to the Ministry of Education's call to build safe and smart campuses.

Students in school for a day

Daily Activities of Teachers at School

Primary School VS Junior High School

■ Core Elements of Primary School

- Using data from hardware and application platforms, we can create a **comprehensive growth profile** to drive school development towards specific goals
- Data-driven insights from smart school scenarios and big data enable us to **identify students' knowledge deficiencies and interests**, facilitating the tailoring of daily teaching services.
- A more effective **home-school communication** network

■ Three Important Phase :

- Basic infrastructure phase
- Teaching application coverage phase
- Data-driven phase for informed decision-making

■ Core Elements of Junior High School

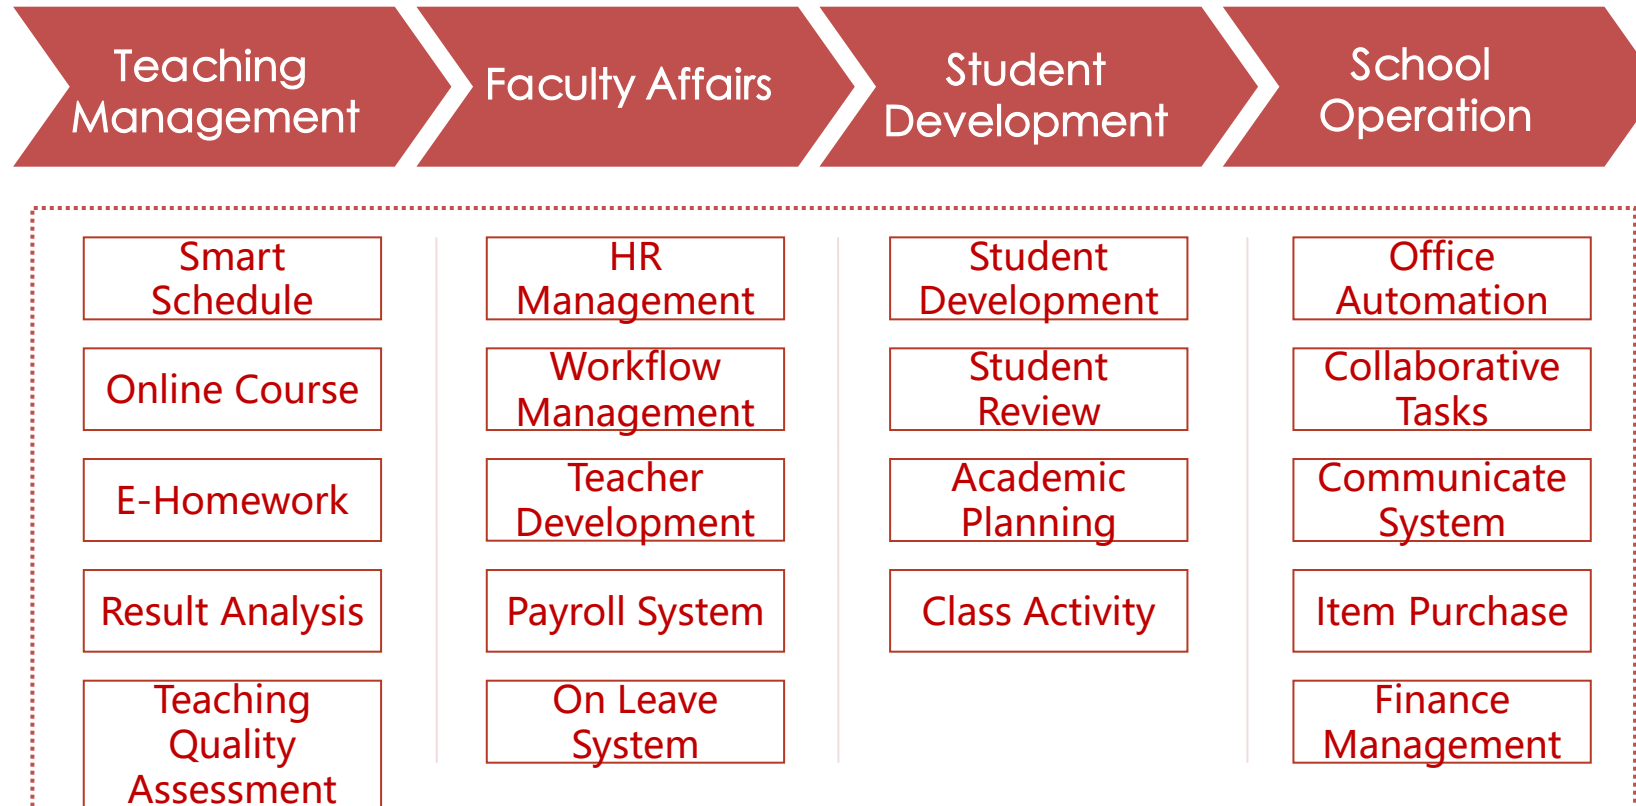

- By leveraging information technology and big data analytics, we aim to elevate the overall **quality of education** by focusing on both teaching and learning.
- Focusing on **academic performance**, we utilize data mining in smart school to conduct diagnosis and reduce the workload for both teachers and students.
- Implementing a **systematic approach to teaching** by guided learning, lesson preparation, teaching, assignments, exams, and evaluation.

■ Three Important Phase :

- Implementing fundamental teaching applications
- Integrating technology across the entire teaching process
- Data-driven decision-making for comprehensive educational improvement

Smart Management

By integrating four management sub-platforms and nineteen application systems, we can cover all aspects of school teaching, office work, administration, and student life to enhance the overall management capabilities of the school.

Platform Overview

The "Digital School" service is a professional operation-level digital school service support management cloud platform provided by Netview for operators. It uses the Internet and 5G technology, **real-time video monitoring, campus card (attendance access control, card swiping and photo taking), safe school bus, home-school interaction, family phone, APP interactive functions**, and uses the Internet, mobile informatization, 5G and other high-tech technologies to provide departments, schools, and parents at all levels with an effective tool for safety management, home-school interaction, and mutual learning. It provides a system service platform for safety management and home-school interaction for primary and secondary schools, kindergartens, and parents.

Multimedia classroom

Conference Hall

Premium function room

School Cloud Desktop

Computer room system

Comprehensive teaching platform

Safe positioning query function

Parents or teachers can instantly query students' location information through the system platform, WeChat, or APP client.

Smart card management function

The student card contains the student's name, class, photo and other valid information. The chip can store the student's academic information, family information, previous test scores, teacher comments and other archival information, which is convenient for school digital management. It can be used as an electronic admission ticket for examinations, a canteen meal card, a library card, a school consumption card, a school bus card or a bus card, etc., to achieve a one-card system inside and outside the campus.

Campus attendance function

Rapid RFID card reading induction technology, contactless long-distance identification, when students enter and leave the school, parents will receive synchronized entry and exit information.

Electronic fence function

Set the scope of permitted activities for your child, such as leaving school during school hours, and the school will receive alarm information.

Activity track query function

Replay and query the student's activity track to understand the user's activity track over a period of time.

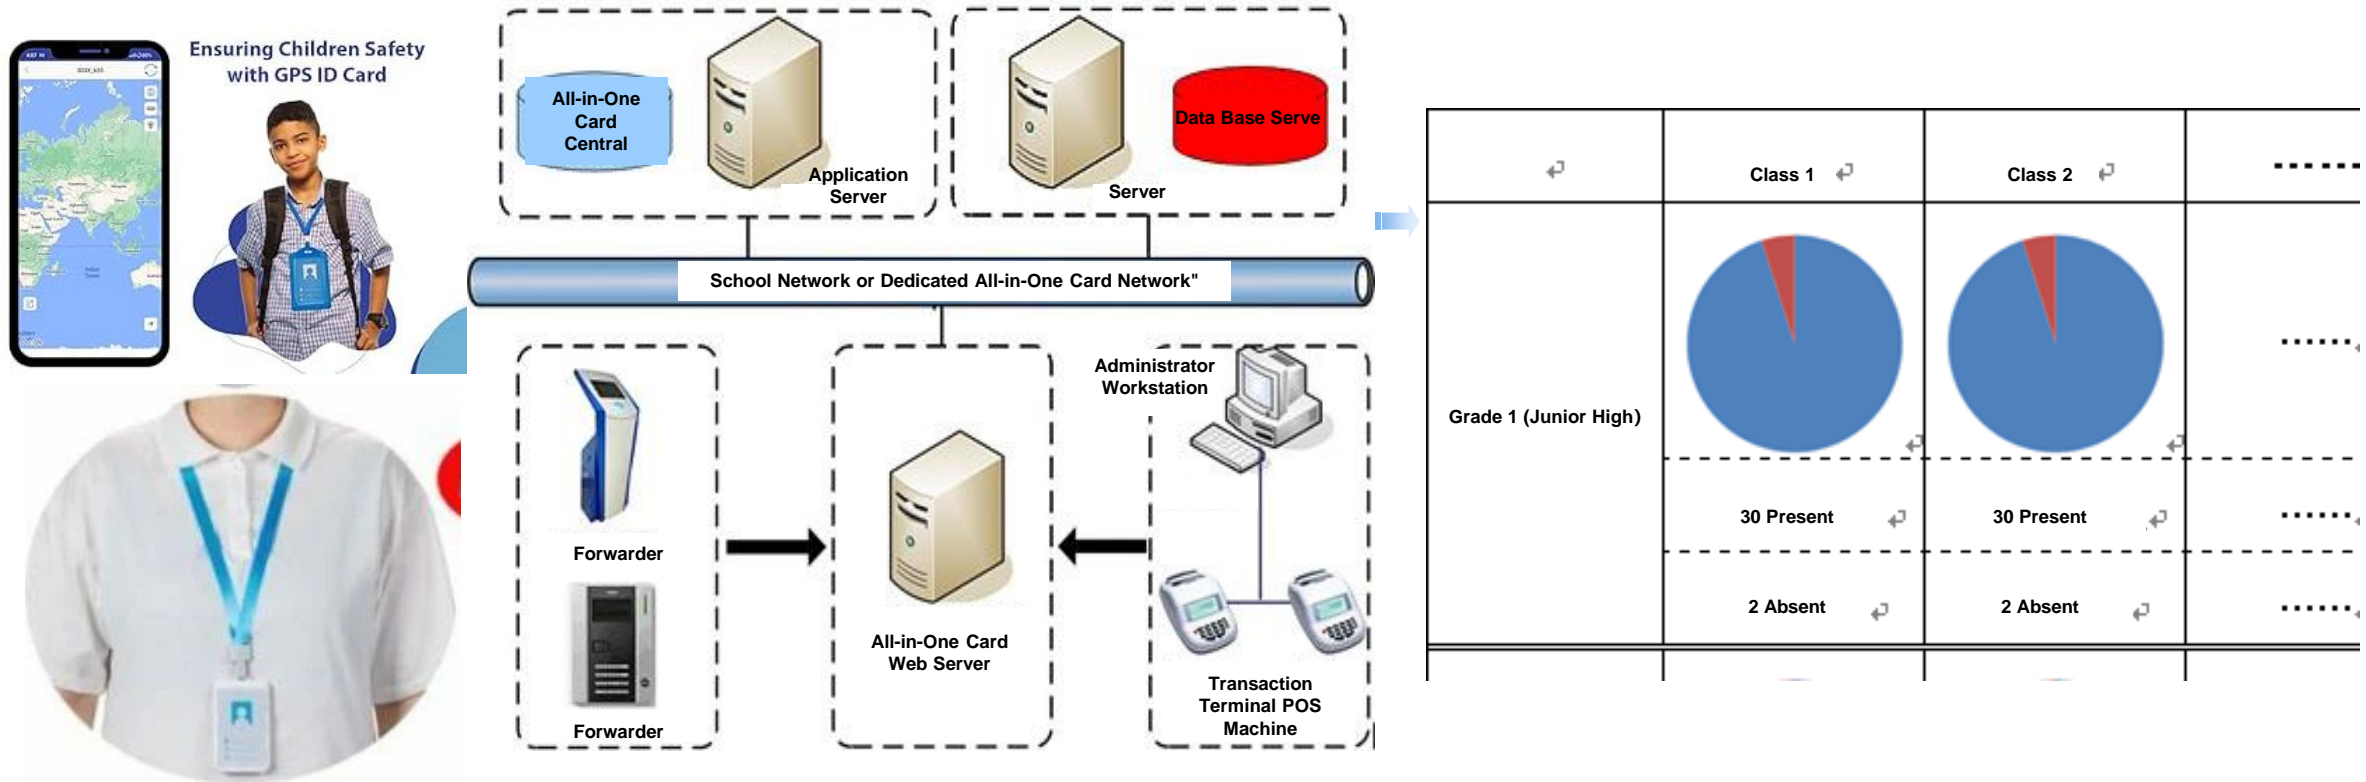

Help function (SOS)

When students encounter an emergency, they only need to press the emergency help button for 10 seconds, and the device will promptly call the family phone number until it is connected, and send the user's alarm location information to the family phone number. At the same time, the institution supervision platform will display an alarm information prompt.

School Comprehensive Platform-Campus Card

The school card uses RFID technology to enable teachers and students to perform operations such as identity recognition, access control, attendance, internal consumption, meeting sign-in, computer access and Internet access in public computer rooms, and borrowing and returning books from the library.

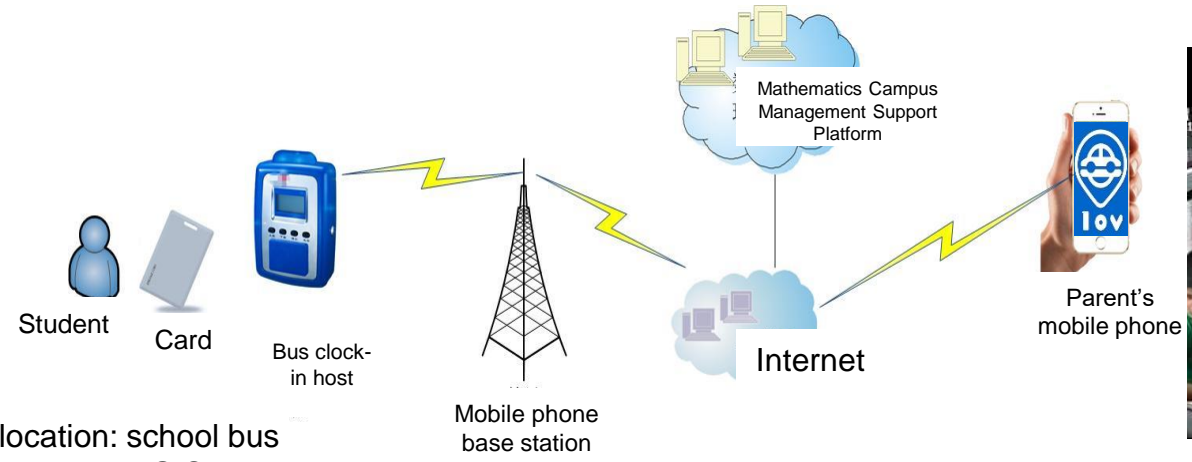

School bus safety

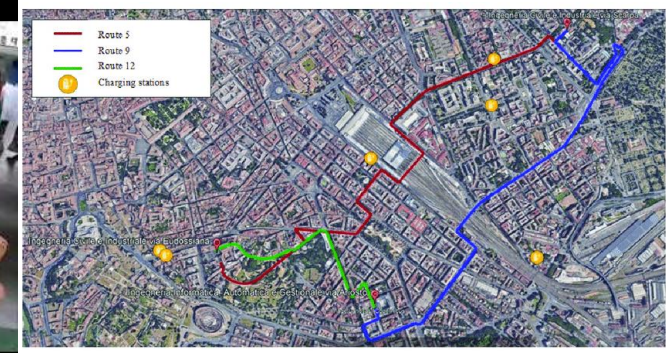

School bus remote monitoring

School bus attendance

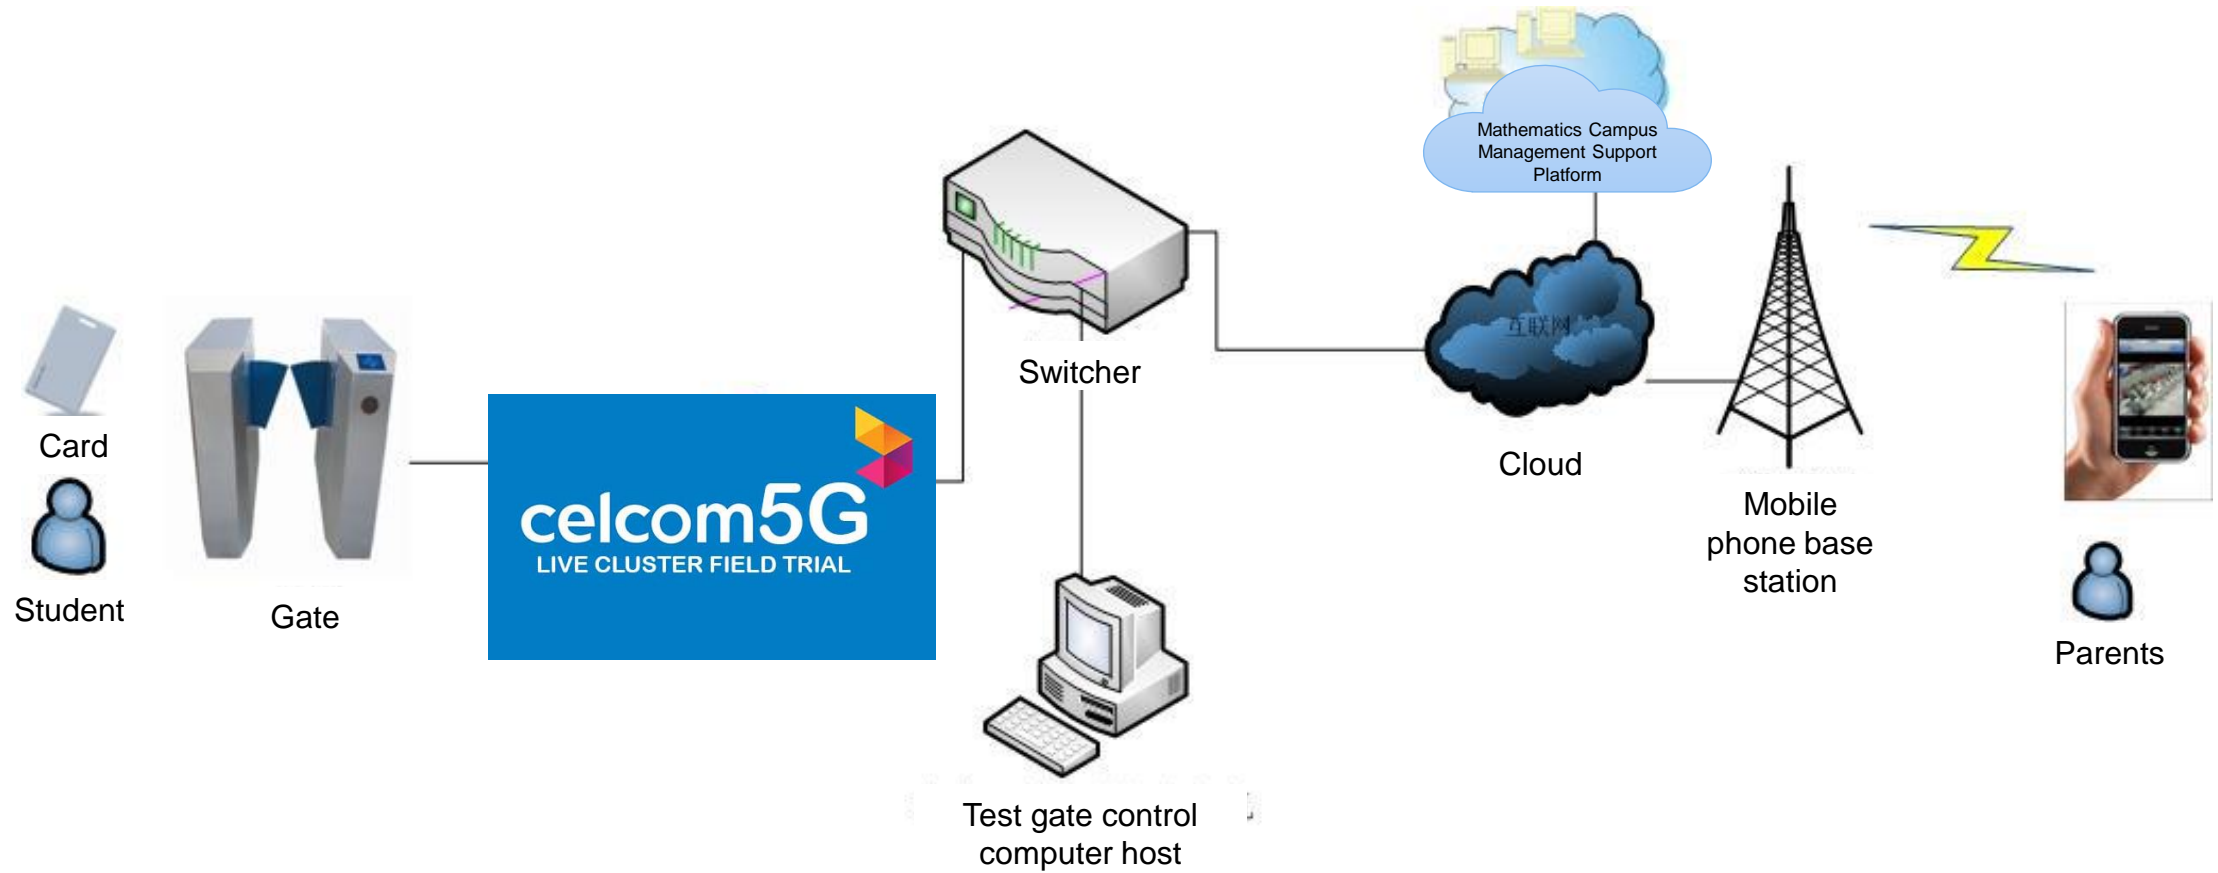

Installation location: school bus
 Connection method: 5G SIM card
 Features: voice and non-voice, voice can broadcast "Good morning, kids", other times "Goodbye, kids"
 Card type: voice version IC card, non-voice version ID card

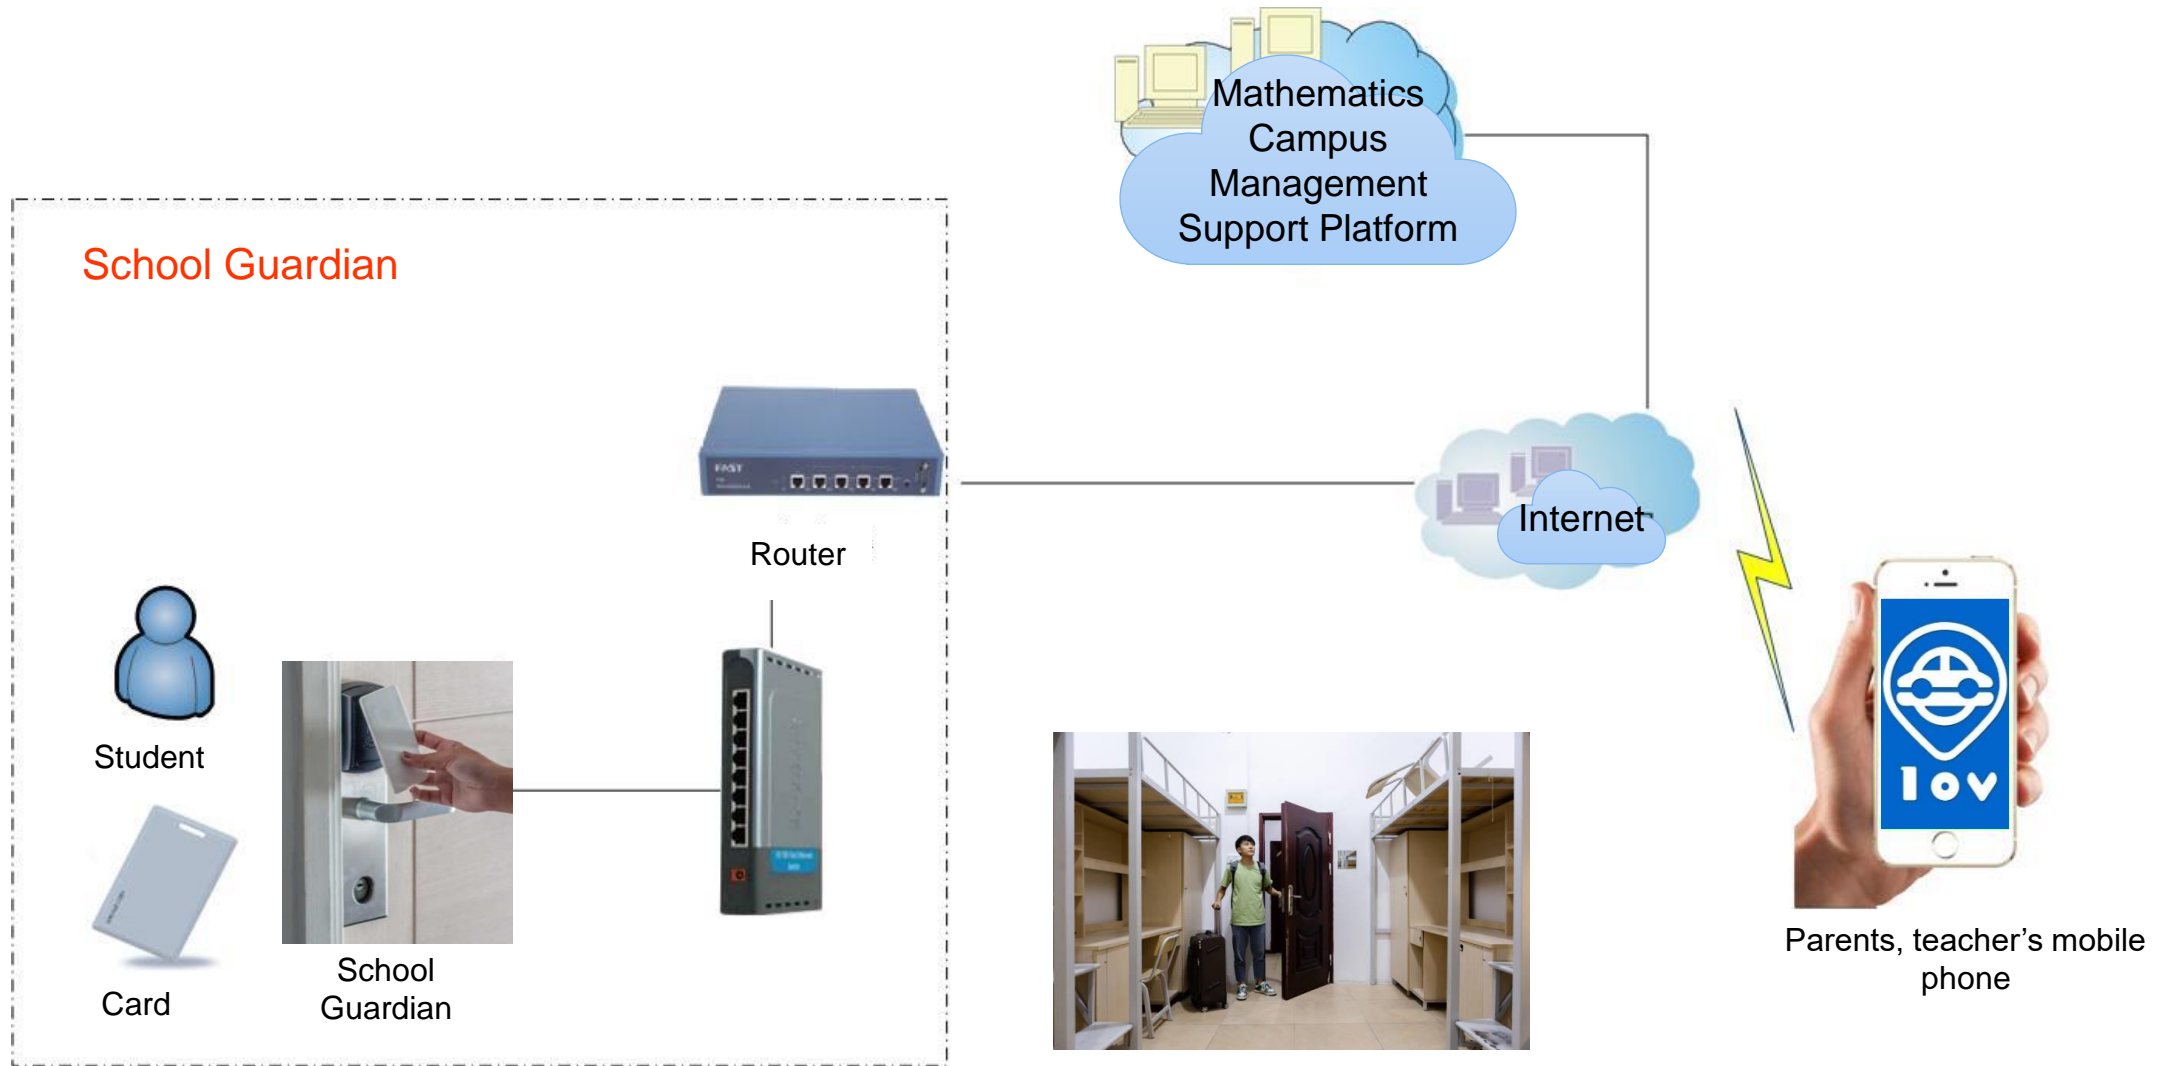

APP remote video broadcast, location check, speed measurement, track check

Electronic gate access
control attendance

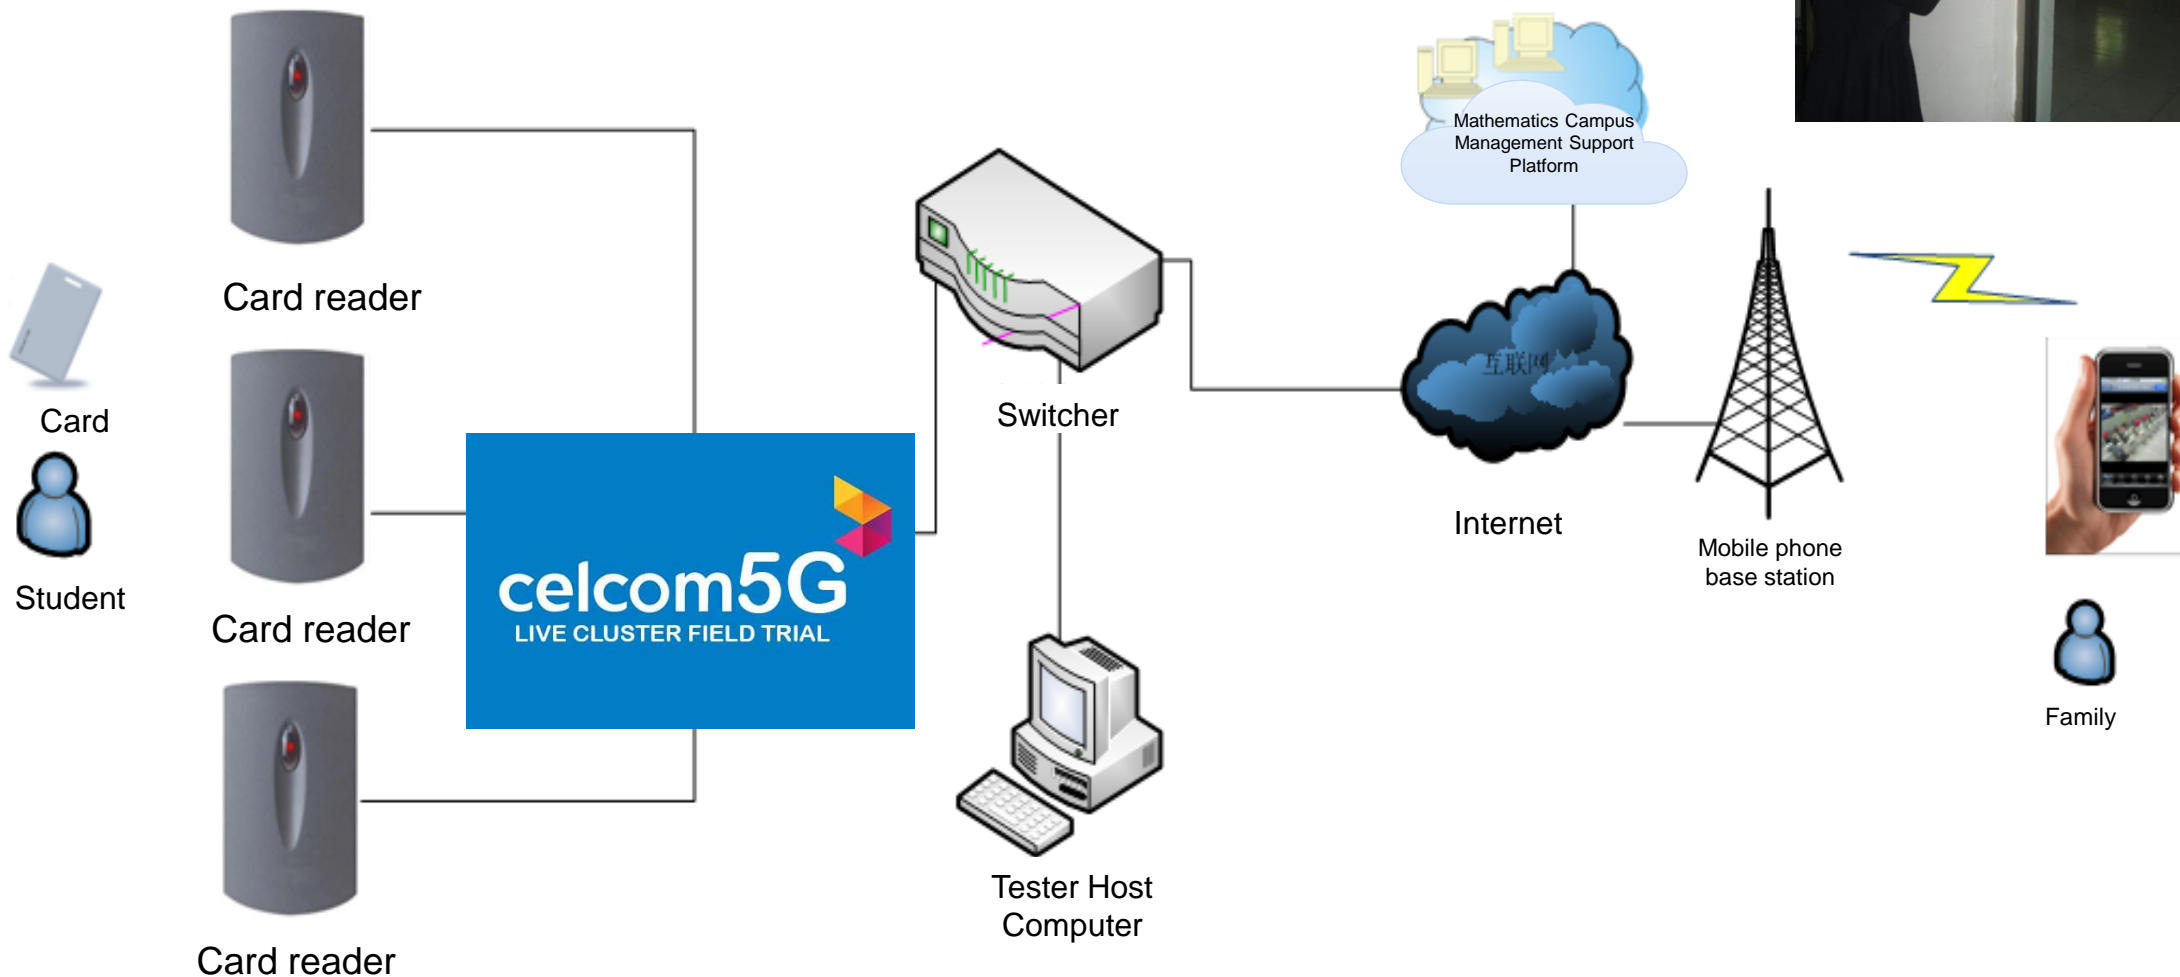

Features: One card per person, access control by swiping the card, safe and reliable

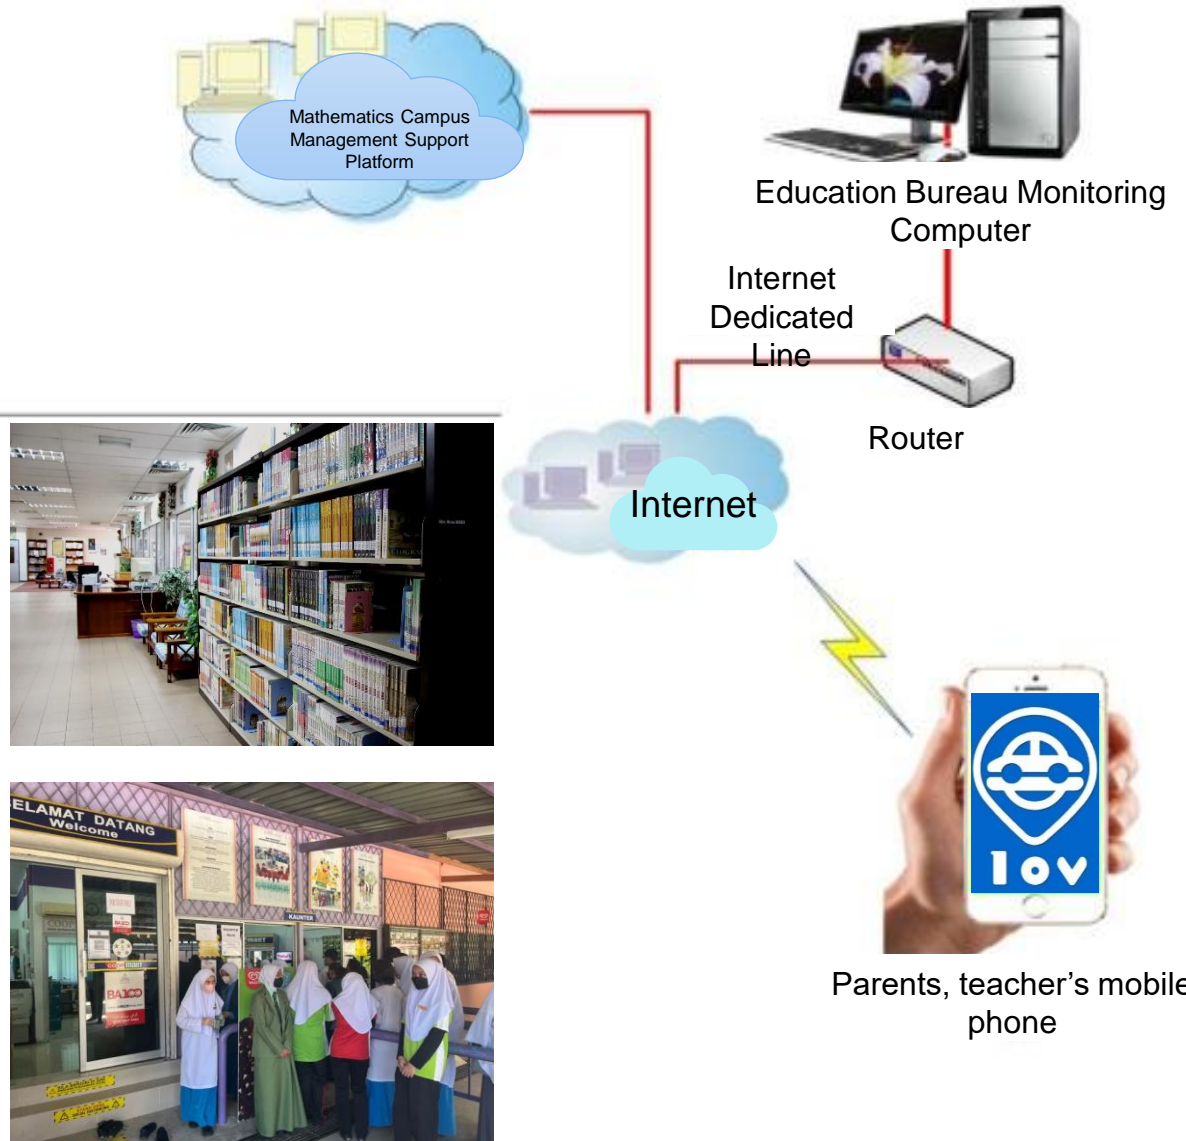

Advantages: Identity recognition, card swiping and attendance taking photos, safe and considerate

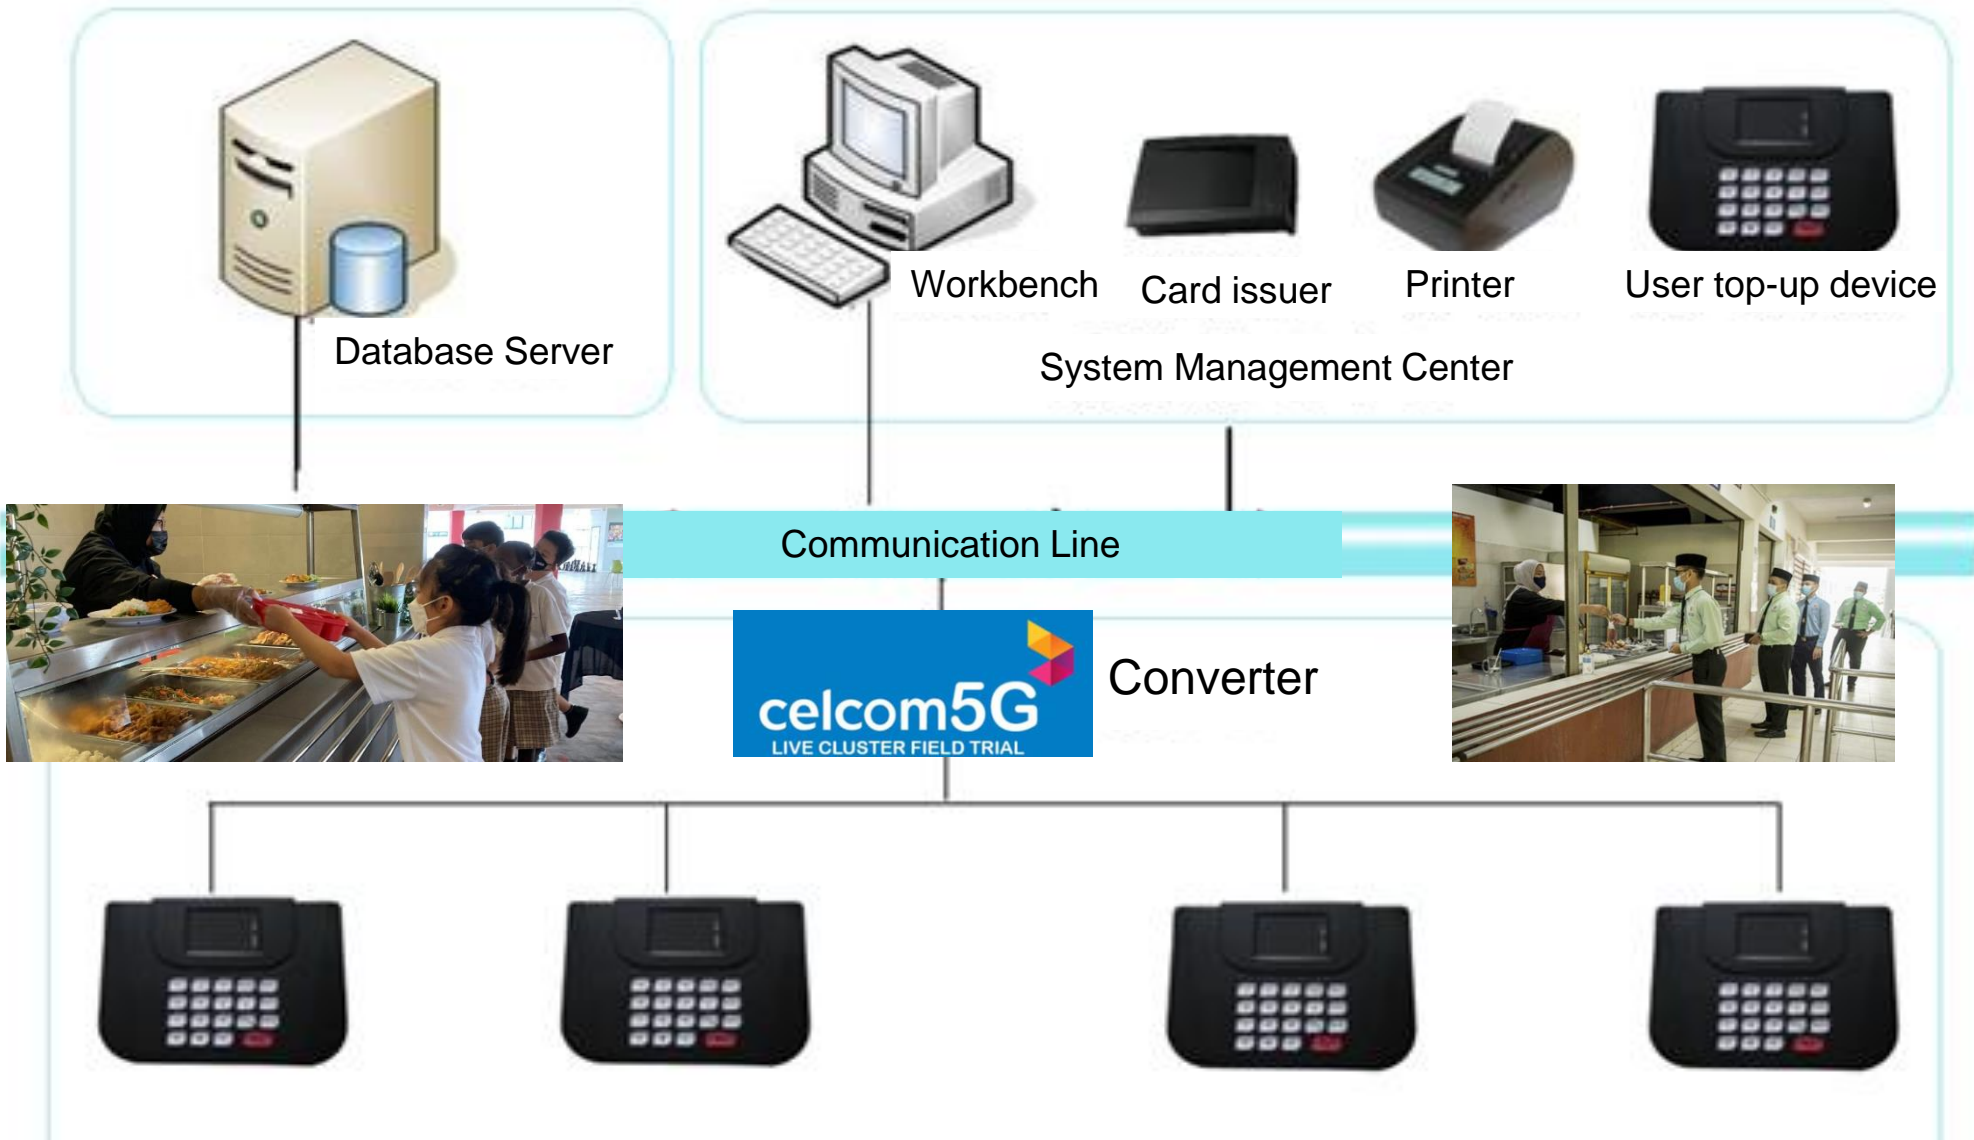

Dormitory access card Dormitory access card

Advantages: barrier-free portable card swiping, with a mechanism to determine whether students to borrow book and by thing at CoopMart

Parents, teacher's mobile phone

Home-school interaction (APP, webpage, SMS and other interactive methods)

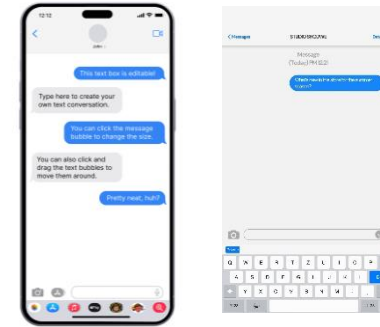

Teachers and parents can actively check school announcements, notifications (homework, grade notifications) and safety text messages pushed by the cloud platform through various channels such as the "Digital School" mobile APP.

Digital School Project Investment Interface

Platform Investment

■ The builder provides the digital school platform and is responsible for the platform system and its updates, operations and maintenance.

Hardware Investment

■ School monitoring hardware investment: mainly for cameras, card equipment, family telephones, etc., there are three sources to choose from:

- School' s own investment
- Operator' s investment
- Third-party investment

Network Investment

■ School fiber optic access:
■ School self-investment
■ Carrier investment/lease

A large, soft watercolor splash in shades of light green and teal, centered behind the text. The splash has a textured, painterly appearance with various tones and some darker spots.
